Project 1

| | | |
|-----------|---|-------------------------------|
| Title | : | OnLine Complain System |
| Software | : | JEE 5 |
| Data Base | : | Mysql |
| Team size | : | 3 |

Description:

The project titled as “**OnLine Complain System**” is a web based application. This software provides facility for reporting online crimes, complaints, missing persons, show most wanted person details mailing as well as chatting. Any Number of clients can connect to the server. Each user first makes their login to server to show their availability. The server can be any Web Server. An SMTP Server must be maintained for temporary storage of emails and chat jar files for enable the chatting facilities. The main modules in this project

Project 2

| | | |
|-----------|---|-------------------------------------|
| Title | : | CORPORATE RECRUITMENT SYSTEM |
| Software | : | JEE 5 |
| Data Base | : | Mysql |
| Team size | : | 2 |

Description:

This project Corporate *Recruitment System* is an online website in which jobseekers can register themselves online and apply for job and attend the exam. corporate recruitment system provides online help to the users all over the world. Using web recruitment systems like recruitment websites or jobsites also play a role in simplifying the recruitment process. Such websites have facilities where prospective candidates can upload their CV's and apply for jobs suited to them. Such sites also make it possible for recruiters and companies to post their staffing requirements and view profiles of interested candidates. Earlier recruitment was done manually and it was all at a time consuming work. Now it is all possible in a fraction of second. It is all done online without much time consuming. Today's recruitment applications are designed to do a whole lot more than just reduce paperwork. They can make a significant contribution to a company's marketing and sales activity. Recruitment websites and software make possible for managers to access information that is crucial to managing their staff, which they can use for promotion decisions, payroll considerations and succession planning.

Project 3

| | | |
|-----------|---|---------------------------|
| Title | : | ONLINE MOBILE SHOP |
| Software | : | JSP, Servlet, Html |
| Database | : | MySql |
| Team size | : | 3 |

Description:

● This Project is a Web based Mobile Shoppe, and designed as website. It contains two modules, for customers who visit the page and the admin, who authenticate all the pages. Admin provides many options to the customers like, searching particular product according to the mobile specifications and also user requirements and comparing two models. The admin can import new mobile models, upcoming update mobile price according to the market rate and provide seasonal offers.

And a lot more.
